The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins (ABBS7737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PKDs primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed cartivity of (II) as useful in gene therapy techniques to restore normal activity of (II) or to tract disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of supplement. (II) and its binding partners are useful for treating disorders of sites expressing (II). (I) and (II) are useful for treating disorders of sites expressing (II) are useful for treating disorders of sites expressing (II) are useful for treating disorders of sites expressing (II) and its binding partners are useful in medical imaging controlly abbrarant protein expression or biological activity. The plypeptide and polymucleotide sequences have applications in disorders or produce other types of data and products dependent on DNA and and can to produce other types of data and products dependent on DNA and anno acid sequences. ABG00010-ABG30077 represent novel human diagnostic mino acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at the printed specification, but was obtained in electronic format directly from WIPO at

The invention relates to a library of DNA fragments of Escherichia colistrains comprising polynucleotides (ABA88577-ABA881929 and ABA89533) and encoded proteins (ABB5249-ABB52994-ABB53094) of nature B2/D+A-. The polynucleotides have potential antiflammatory, antibacterial and immunosuppressive activity as part of pharmaceutical compositions used to treat, palliate or prevent extra-intestinal E colinfections. The polypeptides are useful for determining the phylogenic group of a given E. coli strain. These polypeptides can detect and treat an undesired development of E. coli, particularly an extra-intestinal infection that include systemic and non-diarrhoeal infections such as septicaemia, pyelonephritis and meningitis this is particularly as advantageous as bacterial resistence is increasing with the more frequent use of broad spectrum antibiotics
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       A library of DNA fragments of Escherichia coli strains for the phylogenic determination of a given strain comprises polynucleotides of nature B2/D +
                            immunosuppressive; extra-intestinal infection; phylogeny; meningitis; systemic infection; non-diarrhoeal infection; septicaemia; pyelonephritis; antibiotic resistance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

The present invention describes substantially purified human proteins (referred to as open reading frame, ORFX, where X is 1-11491 (see Table 1 on the specification). ARM12722 concode the human ORFX proteins given in ABP00010 to ABP11500. ORFX proteins are useful for treating proteins given in ABP00010 to ABP11500. ORFX proteins are useful for treating a pathology associated with an ORFX-associated disorder. ORFX proteins are useful for treating a syndrome associated with ORFX-associated disorder. ORFX polymucleotide squarcome associated with ORFX-associated disorder. ORFX polymucleotide sequences can be used in gene therapy. ORFX sequences can be used in the treatment of ancer, hyperprolliferative disorders, intrhosis of liver, psoriasis, benign tumours, keloid, degenerative disorders related to organ transplantation, cardiovascular disease, disorders related to organ transplantation, cardiovascular diseases, disorders infectious contains and disorders. Infectious disease, various immune deficiencies and disorders, infectious architis, autoimmune thyroiditis, myasthenia gravis, graft-versus-host disease and autoimmune thyroiditis, myasthenia gravis, graft-versus-host disease and autoimmune inflammatory eye disease. ORFX proteins are also consetul for treating burns, incisions, ulcers, for treating osteoporosis, bone degenerative disorders, or periodonal disease, and for gut consetul for treating burns, incisions, ulcers, for treating observation and treatment of lung or liver fibrosis, coperation or regeneration and treatment of lung or liver fibrosis, coperation, put was obtained in electronic form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/bublished_pot_esquences

The present invention describes substantially purified human proteins (referred to as open reading frame, ORFX, where X is 1-11491 (see Table 1) in the specification). ABN15762 to ABN27252 encode the human ORFX proteins given in ABPD0010 to ABP11500. ORFX proteins are useful for treating or preventing a pathology associated with an ORFX-associated disorder in humans, and in the manufacture of a medicament for treating a syndrome associated with ORFX-associated disorder. ORFX polynucleotide squences can be used in gene therapy. ORFX sequences can be used in the treatment of cancer, hyperproliferative disorders, cirrhosis of liver, psoriasis, benign tumours, keloid, degenerative disorders, hemographic osteoarthritis, neurodegenerative disorders, disorders related to organ transplantation, cardiovascular diseases, diabetes mellitus, systemic lupus erythematosus, hypertenaion, hypothyroidism, cholesterol ester storder and control ester at the control ester and control ester and control ester and control ester at the control ester and control ester and control ester and control ester and control ester and control ester and control ester and control ester and control ester and control ester and control ester and control ester and control ester and control ester and control ester and control ester and control ester and control ester and control ester and control ester and control ester and control ester and control ester and control ester and control ester and control ester and control ester and control ester and control ester and control ester and control ester and control ester and control ester and control ester and control ester and control ester and control ester and control ester and control ester and control ester and control ester and control ester and control ester and control ester and control ester and control ester and control ester and control ester and control ester and control ester and control ester and control ester and control ester and control ester and control ester and control ester and control es

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) admino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and traatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to produce the secreted (I), by inserting the diagnose and treat immune/haemacopoietic-related diseases, especially concern and cancer metastases of haematopoietic-derived cells. AAK64703
                                                                                                                                                                                                                                                                                                                                                                         Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                to AAK87694 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK54942 to AAK54950 and AAM82169 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human, secreted protein; gene therapy; vaccine; treatment; diagnosis;

The invention relates to full length GENSET human nucleic acids encoding potentially secreted proteins. The nucleic acids and the polypeptides considered and be accepted by the prevention, treatment and diagnosis of diseases associated with inappropriate GENSET gene expression. For example, they be used to treat disorders associated with decreased GENSET conserved that affect the actifying mutations or deletions in a patient's genome that affect the actifying mutations or deletions in a patient's concent that affect the actifying mutations or deletions in a patient's patients own production of GENSET polypeptides. Conversely, antisense concleic acid molecules may be administered to down regulate GENSET expression by binding with the cells' own genes and preventing their expression. The sense and antisense nucleic acids may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acid sequences in amples, and hence to determine which patients may be in need of restorative therapy. The GENSET polypeptides in the production of antibodies and in assays to identify modulators (agonists and antagonists) of GENSET polypeptide of expression and activity. The present sequence is a GENSET polypeptide of
                                                                                                                                                                                                                           Full length GENSET human nucleic acids encoding potentially secreted proteins, useful in gene therapy and vaccination against a variety of diseases, and for diagnosis of those diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         cancer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Cytostatic; antiinflammatory; nootropic; neuroprotective; cardiant; gastrointestinal; gene therapy; GENSET; heavy metal toxicity; cancer inflammatory disease; immune disorder; neuromuscular; toxicity; central nervous system; cardiovascular; gastrointestinal.

The present invention relates to novel GENSET polynucleotides (AB236404-AB23691). The polynucleotides and belasistin encoding polypeptides (ABP75963-ABP76368). The polynucleotides and polypeptides are useful in screening and diagnostic assays for abnormal GENSET expression and/or biological activity. They are also useful for screening of compounds for treating or preventing GENSET-related disorders, such as heavy metal toxicity, cancer, inflammatory diseases, immune disorders, and the neuromuscular, central nervous system (CNS), cardiovascular or gastrointestinal effects of the toxicity 2.1%; Score 7; DB 6; Length 99; 100.0%; Pred. (HYSE-) HYSEQ INC

Liu C, Drmanac RT; Tang YT,

WPI; 2001-514838/56. N-PSDB; AA189887 Isolated nucleic acids and polypeptides, useful for preventing diagnosing and treating e.g. leukemia, inflammation and immune disorders.

Claim 20; SEQ ID NO 23848; 1399pp + Sequence Listing; English

The invention relates to human polymucleotides (AAI79941-AAI93841) and the encoded proteins (AA000010-AA013910) that exhibit activity elating to growing to cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polymorphides are useful in gene therapy, vaccines or peptide therapy. The polymothes have various cytokine-like activities, e.g. atem cell growth factor activity, haematopoises regulating activity, tissue growth factor activity, immunomodulatory activity and activity, inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAH32943 to AAH37195 and AAG73514 to AAG77788 represent human colon cancer-associated nucleic acid molecules (N) and proteins (P), where the proteins are collectively known as colon cancer antigens. The colon cancer antigens have cytostatic activity and can be used in gene therapy and vaccine production. N and P may be used in the prevention, diagnosis and vaccine production. N and P may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate P expression. For example, N and P may be used to treat disorders associated with decreased example, N and P may be used to treat disorders associated with decreased that affect the activity of P by expressing inactive proteins or to supplement the patients own production of P. Additionally, N may be used to produce the colon cancer-associated Ps, by inserting the nucleic acids into a host cell and culturing the cell to express the proteins. N and P can be used in the prevention, diagnosis and treatment of colorectal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   sequences used in the exemplification of the present invention. N.B. Pages 666 to 682 and page 7053 of the sequence listing were missing at time of publication, meaning no sequences are present for SEQ ID NO:1027
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Nucleic acids encoding 4277 human colon cancer-associated polypeptides, useful for preventing, diagnosing and/or treating colorectal cancers.

Staphylococcus aureus. A composition comprising the S. aureus protein, a nucleic acid encoding the protein, or an antibody to the protein, is useful as a pharmaceutical, particularly as a vaccine for treating or preventing infection due to Staphylococcus bacteria, specifically an infection caused by S. aureus. The composition is particularly useful for treating or preventing sepsis in a patient. The composition can also be used for diagnostics. The protein is also used in an assay for enzymatic studies and as a target for antibiotics. This sequence represents one of the novel S. aureus proteins of the invention

                                                                                                                                                                                                                                The invention relates to an isolated mucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell.cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Antisense; prokaryotic essential gene; cell proliferation; drug design.
                                                                                                                                                                      New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                             ó

The invertion relates to an isolated mucleic acid comprising any one of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid controlled expression is inhibited by the antisense encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated of polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody apable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting callular continues mucleic acid; (4) an antibody apable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting callular proliferation or the activity of agene in an operon required for collidar proliferation or the activity of agene in an operon required for collidar proliferation or the biological pathway required for proliferation, or that inhibits proliferation of an identifying a gene required for callular proliferation of the biological pathway in which a proliferation-required gene or the biological pathway in which a proliferation-required gene or the biological pathway in which a proliferation-required gene or which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the extent or organism or screening the target of a compound that inhibits the continue of an organism. The antisense nucleic acids are useful for strains; or (13) identifying proteins or screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, C. the target prokaryotic essential genes. Note: The sequence data for this court of the partice of the particle of the particle of the particle of the particle of the particle of the particle of the particle of the particle of the particle of the particle of the particle of the particle of the p
                                                                                                                                                                                                        New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              differentiation; immune stimulating; vaccine; suppression; gene therapy; bematopotasis regulation; tissue growth; activin; inhibin; cadherin; chemotactic; chemokinetic; hemostatic; thrombolytic; anti-inflammatory; tumour invasion suppressor; tumour inhibition.

protein polymucleotides and proteins are predicted to have biological activities which would make them suitable for treating, preventing or supporating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, cytokine and cell proliferation/differentiation activity, haematopoiesis regulating (e.g. as vaccines) or suppressing activity, haematopoiesis regulating activity, tissue growth activity, activity, chemotactic/chemokinetic activity, and thrombolytic activity, receptor/ligand activity, and thrombolytic activity, receptor/ligand activity, and thrombolytic activity. The polynucleotides are also stated to be useful for inhibition activity. The polynucleotides are also stated to be useful for

```
The invention relates to novel human secreted proteins, the nucleic acids encoding them. The protein may exhibit cytokine, cell differentiation activity or may induce production of other cytokines in certain cell populations and may exhibit immune stimulating or immune suppressing activity, which is useful for the treatment of various immune deficiencies and disorders e.g. severe combined immunodeficiency (SCID), autoimmune disorders e.g. multiple sclerosis, systemic lupus crythematosus, rheumatoid arthritis, autoimmune pulmonary inflammation. The proteins are also useful in the treatment of diseases and disorders including tissue, skin and organ transplantation and in graft-versus-host diseases (GVHD), in the induction of tumour immunity, myeloid or lymphoid cell deficiencies, wound healing and tissue repair, in the treatment of burns, incisions and ulcers, as well as in treatment of periodontal disease, osteoporosis or osteoarthritis, mediated by inflammatory processes, diseases of the peripheral nervous system, Alzheimer's,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Parkinson's disease, Huntington's disease, amy orthoghic lateral sclerosis, and Shy-Drager syndrome, infections, infarction of cardiac and central nervous system vessel e.g. stroke, sepsis, inflammatory bowel disease, ulcers, bone regeneration. The protein, having activin- or inhibin-related activities is useful as a contraceptive based on the ability of inhibins to decrease fertility in female mammals and decrease spermatogenesis in male mammals. The proteins and nucleic acids are also useful as food supplements. The present sequence represents a secreted protein of the invention
                                                                                                                                                                                                                                                            Clark H;

New secreted proteins and encoding polynucleotides, useful in gene therapies, particularly for preventing or treating autoimmune disorders, cancer, graft-versus-host disease, wound, osteoporosis, stroke or inflammations.

Disclosure, Page 343-344; 349pp; English.

The invention relates to isolated polymucleotides (ABA90876-ABA90968 and ABA9080) and encoded proteins (ABB55698-ABB55800), especially polymucleotides SEQ ID NO 1 (ABA90876) and SEQ ID NO 19 (ABA90885) and polymucleotides SEQ ID NO 10 (ABB55707) contained in proteins SEQ ID NO 2 (ABB55698) and SEQ ID NO 20 (ABB55707) contained in clones bd306-7 and yb8-1 respectively and the clones bd306-7 and yb8-1 ace deposited with the American Type Culture Collection (AFCO) with accession number 98599. The polymucleotides and encoded polypeptides have cytostatic, anti-inflammatory, immunomodulator, vulnerary, neuroprotective, activity, inhibin, chemotactic, haemostatic, thrombolytic and anti-inflammatory activity and actinia as cytokine modulators and anti-inflammatory activity and actinia as cytokine modulators and anti-inflammatory activity and actinia as cytokine modulators and collections, particularly for preventing, treating or ameliorating any of the following diseases: immune deficiency and disorders; e.g. bacterial cor funcial inflammatosus or graft-versus-host disease; myeloid or lymphoid cell deficiencies; wound, burns, indisions and ulcers, osteoporosis or contentral and peripheral nervous system diseases and

neuropathies, e.g. Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis or Shy-Drager syndrome; haemophilia, cardiac infarction or stroke; inflammations, shock, sepsis or systemic inflammatory response syndrome, ischaemia-reperfusion injury, endotoxin lethality, arthritis, inflammatory bowel disease or Crohn's disease; or tumours or cancers, pemphigus vulgaris or pemphigus foliaceus Gaps ; 2.1%; Score 7; DB 5; Length 176; 100.0%; Pred. range of human polypeptides, useful in genetic Nucleic acids encoding a range o vaccination, testing and therapy

Claim 20; Page 403-404; 765pp; English.

the first the following the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptides. The polypeptides are also useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying a density and an antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptide. Vectors comprising the nucleic acids encoding the polypeptides and cells genetically engineered to express them are also useful for producing the proteins. The proteins as nutritional supplements. They may be used to increase tem cell proliferation; to regulate haematopoiesis, and in bone, cartilage, tendon an unitation; as anti-inflammatory agents; and in treatment of leukaemias. ANU29510-AAU33304 represent the amino acid sequences of novel human can be used to increase of novel human can be used to increase of novel human can be used as nutritional supplements. invention relates to novel human secreted polypeptides. New polynucleotide and polypeptide useful for diagnosing, preventing or treating conditions such as neurodegenerative diseases, anemias, platelet disorders, wounds, burns, ulcers, osteoporosis, autoimmune diseases or cancer

Claim 20; SEQ ID NO 1581; 1185pp; English.

The invention relates to 971 novel human CDNA sequences (ADC29919-ADC30889) and the polypeptides they encode (ADC30890-ADC31860). The invention also relates to mucleic acid sequences over 99% identical with the novel human cDNAs. The invention additionally encompasses expression vectors and host cells comprising a mucleic acid of the invention; the recombinant production of a polypeptide of the invention; an antibody against a polypeptide of the invention; an antibody polymucleotides or polypeptide of the invention; and methods of identifying a compound which binds to a polypeptide of the invention. The invention further discloses methods of peventing, treating or ameliorating a medical condition; kits comprising polymucleotide probes and/or monoclonal antibodies for carrying out the methods of the invention and identification of compounds that modulate the expression or activity of the polymucleotide and/or polypeptide; and 767 contig sequences corresponding to the cDNA sequences of the invention are useful in diagnostics, draw screening, forensics, gene mapping, in the identification of mutations responsible for genetic disorders or other traits, for assessing biodiversity, and in producing many other types of data and products dependent on DNA and amino acid sequences. They are also used for treating diseases such as Parkinson's disease, Alzheimer's disorders wounds burner also patestory. disorders, wounds, burns, ulcers, osteoporosis, autoimmune diseases or cancer. The nucleic acids may also be used as hybridisation probes or AAG30715 standard; protein; 213 AA.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Dirofilaria immitis mature venom allergen antigen 5-like protein VA5 (AAW11481), or PDIVA205, is capable of eliciting an immune response (cellular and/or humoral) in animals. It is encoded by a cDNA molecule nDiVA615 (AAT51379). VA5-like proteins (see also AAW11480-86) can be used in vaccines to prevent helminth infection
primers, and in the recombinant production of a protein. The polypeptides are also useful in generating antibodies, as molecular weight markers, and as food supplements. The present sequence represents a specifically claimed human polypeptide sequence of the invention. Note: The sequence atta for this partent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                             Venom allergen antigen 5-like gene; VA5; helminth; parasite; nDiVA615; PDiVA205; vaccine; heartworm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          'n
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Nucleic acid encoding helminth venom allergen antigen 5-like protein pref. from Dirofilaria immitis or Onchocerca volvulus, useful esp. in vaccines to prevent helminth infection.
                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

                                                                                                                                                                                                                                                                                                                         The invention relates to novel isolated human G protein-coupled receptors (nGPCR-x). The nGPCR-x can be used for screening compounds which can be used to treat mental disorders, thyroid disease, renal failure, inflammatory conditions such as Crohn's disease, rheumatoid arthritis, autoimmune disorders, schizophrenia, migraine, stroke, dementia, disease, n. Parkinson's disease, Alzheimer's disease, and Huntington's disease. They may also be used for treating viral infections such as human immunodeficiency virus (HIV), type 2 diabetes, obesity, anorexia, atherosclerosis, cancer, and sexual dysfunction. AAUJS6172 and represent the amino acid sequences of novel human G protein-coupled receptors, nGPCR-2031 to nGPCR-2140 respectively, as described in the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to novel human secretory or membrane proteins (ADA4672-ADA55710) and their coding sequences (ADA52433-ADA54071). The coding sequences are useful in the gene therapy of diseases caused by abnormalities of the proteins, e.g. cancer, inflammatory diseases, osteoporosis or neurological disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ishii S;

Dirofilaria immitis venom allergen antigen 5-like protein VAS (AAW11479), or PolvA221, is capable of eliciting an immune response (cellular and/or humoral) in animals. It is encoded by a CODN clone (AAT5176) isolated from a D. immitis cDN library by screening with immune dog serum. VAS-like proteins (see also AAW11480-86) can be used in vaccines to prevent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; open reading frame; ORFX; gene therapy; cancer; cirrhosis; hyperproliferative disorder; psoriasis; benign tumour; haemorrhage; degenerative disorder; osteoarthritis; neurodegenerative disorder; cardiovascular disease; diabetes mellitus; systemic lupus erythematosus; hypertension; hypothyroidism; cholesterol ester storage disease; immune deficiency; immune disorder; infectious disease; autoimmune disorder; rheumatoid arthritis; autoimmune thyroiditis;

The present invention describes substantially purified human proteins (referred to as open reading frame, ORFX, where X is 1-11491 (see Table 1

Novel human polypeptides and polynuclectides useful for diagnosing, preventing and treating cardiovascular disease, neurodegenerative, hyperproliferative disorders and autoimmune disorders.

in the specification). ABN15762 to ABN27252 encode the human ORFX creating or preventing a pathology associated with an ORFX-associated disorder in humans, and in the manufacture of a medicament for treating a syndrome associated with ORFX-associated disorder. ORFX polymucleotide sequences can be used in gene therapy. ORFX sequences can be used in the manufacture of a medicament for treating a syndrome associated with ORFX-associated disorder. ORFX polymucleotide sequences can be used in gene therapy. ORFX sequences can be used in the treatment of cancer, hyperproliferative disorders, cirrhosis of liver, psoriasis, benign tumours, keloid, degenerative disorders related to organ transplantation, cardiovascular diseases, disorders related to organ transplantation, cardiovascular diseases, disorders mellitus, systemic corrage disease, various immune deficiencies and disorders; infectious diseases, autoimmune thyroders such as multiple sclerosis, rheumatoid archaitis, autoimmune thyroders such as multiple sclerosis, rheumatoid archaitis, autoimmune inflammatory eye disease. ORFX proteins are also carburitis, autoimmune inflammatory eye disease. ORFX proteins are also useful for treating burns, incisions, ulcers, for treating setephorosis, bone degenerative disorders, or periodontal disease, and for gut protection or regeneration and treatment of lung or liver fibrosis, protection or regeneration tissues and conditions resulting from systemic cytokine damage. NB. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPPO at ftp.wipo.int/published_pct_sequences

```
the invention relates to a novel ubiquitin conjugating enzyme (UBC)

bomologue, RATLIG6 (regulated in activated T-lymphocytes 1d6) and its

corresponding nucleic acid. The invention also relates to methods for

treating, diagnosing, preventing and screening for disorders related to

the expression of RATLIG6. UBC is useful for screening for candidate

compounds capable of binding to and/or modulating its activity. UBC is

useful for treating an immune or neuronal disorder in a mammal. The

method is useful for treating a cancer or tumour. It is useful for

suppressing the immune response in a subject requiring the suppression.

It is also useful for treating lymphopooliferative disorder. Cancer e.g.

disorder, inflammatory disorders e.g. rheumatoid arthritis, asthma,

multiple sclerosis, psoriasis, etc, ineuronal disorders e.g. Alzheimer's

disease, dementia, depression, epilepsy, etc, immune disorder or immune

related disorders such as acquired immuno deficiency syndrome (AIDS),

allergy, anaemaia, atopic dermatitis, diabetes mellitus, myocardial

infarction, etc, developmental disorders e.g. Cushing's syndrome, renal

tubular acidosis, gonadal dysgenesis, dysplasia, cataract, etc. The

present sequence is human RATLIG6 transmembrane domain
Novel ubiquitin conjugating enzyme polypeptide isolated from activated human T cell, for screening modulators useful for treating cancer, immune disorder, lymphoproliferative disorder, neurodegenerative disorder.

Propionibacterium acnes polypeptides and nucleic acids useful for

```
Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by 2. Lacres. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. The disorders is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the cample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies of specific for P acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and climpate expression and activity of P. acnes polypeptides and confidence treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes proteins by carryme linked immunosorbent assay (BLISA). Note: The sequence data for this patent did not form part of the printed specification, but was considered in electronic format directly from WIPO at
vaccinating against and diagnosing infections, especially useful for
                                                                                     Example 1; SEQ ID NO 24967; 1069pp; English

2003-381789/36. N-PSDB; ACF64564. New Propionibacterium acnes polypeptides and polynucleotides encoding the polypeptide, useful for diagnosing, preventing or treating acne vulgaris, or for stimulating an immune response specific for a P. acnes protein.

 $x \times 0$ 

```
The invention relates to an isolated polymucleotide (ACF6443-5-AUF6473) canoding a Propionibacterium acnes polymetides. The invention also relates to polypeptides encoded by the polymucleotides (ABM35624-ABM64536) and to immunogenic fragments of P. acnes polypeptides. The invention additionally encompasses expression vectors and host cells comprising a polymucleotide of the invention, antibodies against polypeptides of the invention; in immunostation, fusion proteins comprising a polypeptide of the invention; and immune response specific for a P. acnes to polymucleotides, antibodies, fusion proteins. T cell populations, or antigen-presenting cells that express the polymucleotides, antibodies, fusion proteins, T cell populations, or antigen-presenting cells that express the development of P. acnes in a patient. The P. acnes polymetides to antibodies, polymucleotides, antibodies, fusion proteins, T cell populations or antigen-presenting cells that express the correction or for invention and manner response specific for a P. acnes in a patient. The P. acnes polymeptides, polymucleotides, antibodies, fusion proteins, T cell populations or antigen-presenting cells that express the colympetides are useful for dagnosing, preventing or treating acne protein. The polymucleotides can almanue response specific for a P. acnes or protein. The polymucleotides can almanue response specific for a P. acnes or unclaic acid hybridisation. The vaccine composition is useful for performing a diagnostic assay. The present confidence represents a polymeptide predicted to be encoded by an ORF (open reading frame) contained within the P. acnes polymucleotides of the printing frame) contained within the P. acnes polymucleotides of the frame and contained within the performing diagnostic form part of the printing and contained within the performance of the printing form part of the printing of the printing of the printing of the printing of the printing of the printing of the printing of the printing of the printing of the printing of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; open reading frame; ORFX; detection; cytostatic; hepatotropic; vulnerary; antipsoriatic; antiparkinsonian; noctropic; neuroprotective; anticonvulsant; osteopathic; antiparkinitc; immunosupressant; cardiant; immunostimulant; thrombolytic; coagulant; vasotropic; antidiabetic; hypotensive; dermatological; immunosuppressive; antiinflammatory; antitivital; antibacterial; antibungal; antirhenmatic; antithyroid; antitivecins antianemic; gene therapy; cancer; proliferative disorder; hypertension; neurodegenerative disorder; osteoarthritis; graft vs host disease; cardiovascular disease; diabetes mellitus; hypothyroidism; SCID; AIDS; cholesterol ester storage; systemic lupus erythematosus; infection; severe combined immunodeficiency; malaria; autoimmune disorder; asthma; allergy; aplastic anaemia; nocturnal haemoglobinuria; burn; wound;

AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: cytostatic; hepacotropic, valnerary; antiporalatic; antiparkinsonian; nootropic; neuroprotective; osteopathic; antiporalisant; inmunosuppressant; immunostimulant; cardiant; thrombolytic; cagulant; vasotropic; antidabetic; hypotensive; dermatological; immunosuppressive; antibacterial; antitungal; antitheumatic; antithyroid; an antibacterial; antivines an or treating pathological conditions associated with an ORFX associated disorder. The nucleic acids can be used to express ORFX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative used to treat cancers, proliferative disorders, neurodegenerative disorders, osteoarthritis, graft vs host disease, cardiovascular disease, diabetes mellitus, hypertension, hypothyroidism, cholesterol eser storage, storage, systemic lupus erythematosus, severe combined immunodeficiency
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (SCID), AlDS, viral, bacterial or fungal infection, malaria, autoimmune disorders, asthma, allergies, aplastic anaemia, burns, wounds, bone and cartilage damage, nocturnal haemoglobinuria, antiinflammatory disease; to enhance coagulation; to inhibit thrombosis, and as a contraceptive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                Novel nucleic acids and peptides derived from open reading frame X, useful for treating e.g. cancers, proliferative disorders, neurodegenerative disorders and cardiovascular disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Mycobacterioses; survival; virulence; protective antigen; vaccine; mycobacterial disease; tuberculosis; leprosy.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                             This invention relates to a novel method for identifying essential genes for survival or virulence of mycobacteria species. The method comprises aligning the genomic sequence of a first mycobacterium species on a genomic sequence of a second mycobacterium species and electing a polymuclectide sequence that is highly conserved in both genomes with no counterparts in other bacterial genomic sequences and that corresponds to an essential gene for the survival or virulence of mycobacterium species. The method of the invention is useful for detecting M. tuberculosis or M. Impare infection. The method reduces the number of potential new targets and protective antigens for new drugs and vaccine compositions to treat and prevent mycobacterial diseases, particularly tuberculosis and hycobacterium tuberculosis and Mycobacterium leprae identified using the method of the invention
                                                                                Identifying and selecting genes for survival or virulence of mycobacteria by a comparative genomic analysis of the sequences of Mycobacterium tuberculosis and M. leprae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Antisense; prokaryotic essential gene; cell proliferation; drug design.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Zyskind JW;

the invention fracter to an isolated muchel action where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid, (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid, (4) an antibody capable of specifically binding the polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid, (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular or proliferation or the activity of a gene in an operon required for proliferation or that has an activity against a biological pathway or proliferation; (7) identifying a compound that influences the activity of pathway in which a proliferation-required gene or its gene product lies or a gene required for cellular proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profifing a compound's activity; (11) a culture comprising strains in which the gene product is overspressed or underexpressed; (12) determining the extent or organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene product is overspressed or underexpressed; (12) determining the extent or organism; or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids required for cellular proliferation of a compound organism. The antisense nucleic acids required for cellular proliferation of a compound the capacity or a capacity or a capacity or capacity or capacity or capacity or capacity or capacity or capacity or conclude for rational concludes for rational concludes for rational concludes for rational concludes for rational concludes for rational concludes for rational concludes for rational concludes for c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                hybridisation assay, genetic mapping; gene expression control; promoter;

This invention describes novel nucleic acid sequences (A) that are expressed at high level in normal prostatic tissue. Polypeptides (I) encoded by (A) are used: (a) for identifying agents for treatment of prostatic cancer and (b) for therapy of prostate cancer, optionally where expressed by gene therapy methods. (A) is also used to isolate fullingth genes (for gene therapy) and for recombinant production of (I), which can be used to raise specific antibodies. (A) are identified by assembly of ESTs (expressed sequence tags) before these are analyzed for the false results, as regards tissue specificity. This approach eliminates many of the false results, as regards tissue specificity, associated with known methods that use single (usually short) ESTs. AAY48304-Y48456 represent peptides encoded by the expressed sequence tags described in the method
                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Protein identification; signal transduction pathway; metabolic pathway; hybridisation assay; genetic mapping; gene expression control; promoter; termination sequence.
New nucleic acid expressed at high level in normal prostatic tissue and encoded polypeptides, used to treat cancer and screen for therapeutic
                                                                                                                                                                                                                                                                                                                                                  Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to novel genes and encoded proteins from Staphylococcus aureus. A composition comprising the S. aureus protein, a nucleic acid encoding the protein, or an antibody to the protein, is useful as a pharmaceutical, particularly as a vaccine for treating or preventing infection due to Staphylococcus bacteria, specifically an infection caused by S. aureus. The composition is particularly useful for treating or preventing sepsis in a patient. The composition can also be used for diagnostics. The protein is also used in an assay for enzymatic studies and as a target for antibiotics. This sequence represents one of the novel S. aureus proteins of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New Staphylococcus aureus protein, useful as a vaccine for treating or preventing Staphylococcal infection, specifically an infection caused by S. aureus, e.g. sepsis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

protein sequences. The HTRM protein and nucleotide sequences are useful for preventing or treating disorders associated with decreased expression or activity of HTRM which include cell proliferative disorders such as attentiosclerosis and cirrhosis, cancers including adenocarcinoma and leukaemia; immune disorders such as AIDS, Addison's disease, diabetes mellitus, rheumatoid arthritis, multiple sclerosis, systemic lupus erythematosus, and myasthenia gravis; infections and trauma. Antagonists of the HTRM polypeptides are useful for treating or preventing disorders associated with increased expression or activity of HTRMs. HTRM polypeptides, their immunogenic fragments or oligopeptides are useful for cereming techniques.

CC of the HTRM polypeptides for compounds in drug screening techniques.

CC of mRNA and regulating gene function by modulating the transcription of mRNA and regulating gene function by modulating the activity of HTRM. Vectors expressing HTRM or agonists can also be used to prevent or treat disorder associated with decreased HTRM expression. Antibodies which graceing disporders associated with the expression of HTRM. Nucleotide sequences concoding HTRM may be useful to generate hybridization probes useful in aspears that detect the expression of HTRM. Nucleotide sequences among the maturally occurring genomic sequence and to detect of individuals. Using diagnostic assays, cancer can be detected prior or permitted by appearance of clinical symptoms and thereby progression of cancer can be researched by appearance of clinical symptoms.
                                                                                                                                                                                                                                                                                                                                                                                                                                                  peptides useful for diagnosis, prevention and treatment of cancer and
Addison's disease; multiple sclerosis; rheumatoid arthritis; infection; trauma; myasthenia gravis; adenocarcinoma; immune disorder; treatment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAY73325-Y73389 are human transcriptional regulator molecule (HTRM)

The present sequence represents a Sulfolobus solfataricus endoglucanase, specifically endo-beta-1,4-glucanase, designated CelA. The new endo-beta-1,4-glucanase is produced by Sulfolobus solfataricus ATCC 35092
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence represents a Sulfolobus solfataricus endoglucanase, specifically endo-beta-1,4-glucanase, designated CelB.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomera, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed in diagnostics as expressed sequence tags for identifying expressed activity of (II) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving abergant protein expression or biological activity. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at the wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity
                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention provides the protein and coding sequences of 444 novel human proteins. These were isolated from expressed sequences tags (ESTS). They can be used to stimulate cell growth, to regulate haematopoiesis e.g. in burn treatment, to regulate the immune system e.g. to treat multiple sclerosis, to regulate activin or inhibin e.g. to treat infertility, to regulate haemostasis or thrombolysis e.g. to treat and cancer, to screen for drugs, to treat inflammatory conditions e.g. rheumatoid arthritis, and to treat inflammatory conditions e.g. rheumatoid arthritis, and to treat nervous system disorders e.g. Parkinson's disease. The present sequence is a protein of the invention

New Acinetobacter baumanii proteins and nucleic acids, useful as reagents for diagnosing a bacterial disease, as components of antibacterial vaccines, as targets for antibacterial drugs, or as biocontrol agents for
                                                                                                                                                                                                                                                                                    The invention relates to isolated Acinetobacter baumannii nucleic acids. The A. baumannii nucleic acids and polypeptides are useful as reagents for diagnosing a bacterial disease, as components of antibacterial vaccines, as targets for antibacterial drugs, to detect the presence of A. baumannii and other Acinetobacter species in a sample, in screening compounds for the ability to interfere with the A. baumannii life cycle or to inhibit A. baumannii infection, and as biocontrol agents for plants. The present sequence represents the amino acid sequence of an A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Antisense; prokaryotic essential gene; cell proliferation; drug design.

    the 613 antisense sequences given in the specification where expression of the 613 antisense sequences given in the specification where expression of the 613 antisense sequences given in the specification where expression of the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense modelic acid, (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense mucleic acid; (4) an antibody capable of specifically binding the polypeptide or its fragment whose expression is inhibited by the antisense mucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation or that has an activity against a biological pathway complicated for proliferation, (14) inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation of the sequence of pathway in which a proliferation required for the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound,'s activity; (11) a culture comprising strains in which the gene product is overexpressed, (12) determining the extent to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense mucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for proliferation in cells other than S. aurens, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target proxaryoric essential genes. Note: The sequence is encoded by one of the target proxaryoric essential genes. Note: The sequence is encoded by one of the target proversory programes, or the retarget proversory and drug decoders. S. typhimurium, partent did not form part of the printed specification, but was

The invention relates to identifying target proteins (ABB90790-ABB94016) for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms using suitable search parameters, where plant sequences having an E-value greater by a factor of 3 than the E-value of most similar non-plant sequences are selected. The polypeptides or nucleic acids encoching them are useful for identifying modulators. The identified modulators are useful as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAH32943 to AAH37195 and AAG73514 to AAG77788 represent human colon cancer-associated nucleic acid molecules (N) and proteins (P), where the proteins are collectively known as colon cancer antigens. The colon cancer antigens have cytostatic activity and can be used in gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Nucleic acids encoding 4277 human colon cancer-associated polypeptides, useful for preventing, diagnosing and/or treating colorectal cancers.
                                                                              Identifying plant target proteins for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequenc from plant with nucleic acid or amino acid sequences from non-plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; colon cancer; colon cancer antigen; diagnosis; detection;

and vaccine production. N and P may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate P expression. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or doletions in a patient's genome that affect the activity of P by expressing inactive proteins or to supplement the patients own production of P. Additionally, N may be used to produce the colon cancer-associated Ps, by inserting the nucleic acids into a host cell and culturing the cell to express the proteins. N and P can be used in the prevention, diagnosis and treatment of colorectal sertingness and cancers. AAH37196 to AAH37204 and AAB77789 represent sequences used in the exemplification of the present invention. N.B. Pages 666 to 682 and page 7053 of the sequence listing were missing at the order of the present for SEQ ID NO:1027
                                                                                                                                                                                                                                                                             ..

The invention relates to identifying target proteins (ABB90790-ABB94016) for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms using suitable search parameters, where plant sequences having an E-value greater by a factor of 3 than the E-value of most similar non-plant sequences are selected. The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are useful as
                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Identifying plant target proteins for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequencifrom plant with nucleic acid or amino acid sequences from non-plant
                                                                                                                                                          .

Methods of determining the enzymatic activity of T-PPS or PPS or its functional fragment are provided that involves contacting delta-aminolevulinic acid with the protein or its functional fragment and measuring the amount of porphobilinogen formed from it. Compounds which can modify the enzymatic activity T-PPS or PPS can also be identified similarly, which are useful for inhibiting plant growth by inhibiting enzymatic activity of T-PPS or PPS or its functional fragment. The compounds thus identified are useful as herbicides. The present sequence represents the PPS enzyme
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention provides novel DNA sequences encoding enzymes such as plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Protein identification; signal transduction pathway; metabolic pathway; hybridisation assay; genetic mapping; gene expression control; promoter;
                                                                                                                                                                                                                                                                                                     Thioredoxin; porphobilinogen synthase; T-PPS; PPS; enzyme; herbicide; delta-aminolevulinic acid; plant growth inhibitor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel plant thioredoxin-porphobilinogen synthase or porphobilinogen synthase polypeptides, useful for identifying compounds for use as herbicides by inhibiting enzymatic activity of the polypeptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Length 384;

The invention relates to a novel ubiquitin conjugating enzyme (UBC)
homologue, RATLIG6 (regulated in activated T-lymphocytes 1d6) and its
corresponding nucleic acid. The invention also relates to methods for
treating, diagnosing, preventing and screening for disorders related to
treating, diagnosing, preventing and screening for disorders related to
the expression of RATLIG6. UBC is useful for screening for candidate
compounds capable of binding to and/or modulating its activity. UBC is
useful for treating an immune or neuronal disorder in a mammal. The
method is useful for treating a cancer or tumour. It is useful for
suppressing the immune response in a subject requiring the suppression.
It is also useful for treating lymphoproliferative disorder, cancer e.g.
disorder, inflammatory disorders e.g. rheumatoid arthritis, asthma,
multiple sclerosis, psoriasis, etc, neuronal disorders e.g. Alzheimer's
disease, dementia, depression, eplepsy, etc, immune disorder or immune
related disorders such as acquired immuno deficiency syndrome (AIDS),
allery, anaemaia, atopic dermatitis, diabetes mellitus, myocardial
infarction, etc, developmental disorders e.g. Cushing's syndrome, renal
tubular acidosis, gonadal dysgenesis, dysplasia, cataract, etc. The
present sequence is human RATLIG6 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; NOVX; cytostatic; antidiabetic; neuroprotective; antiparkinsonian; anorectic; gene therapy; vaccine; cancer; neurodegenerative disorder; Parkinson's disease; metabolic disorder; diabetes; obesity;
                                                                                                                                                                                                                                                                                                                                                       Novel ubiquitin conjugating enzyme polypeptide isolated from activated human T cell, for screening modulators useful for treating cancer, immune disorder, lymphoproliferative disorder, neurodegenerative disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ;

ACF06233 to ACF06242 encode the human NOVX proteins given in ABR83334 to ABR83343, designated NOV1a, NOV2a, NOV3a, NOV4a, NOV4b, NOV5a and have cytostatic, NOV7a, NOV9a and NOV9a respectively. NOVX sequences can have cytostatic, antidiabetic, neuroprotective, antiparkinsonian and anorectic activities, and can be used in vaccines and gene therapy. The NOVX polypeptides can be used for preparing a composition for treating or preventing a pathology associated with the NOVX-polypeptides e.g. cancer, neurodegenerative disorders such as Parkinson's disease, or metabolic disorders such as diabetes or obesity, or for tissue typing

The interaction relates to an isolated muciesc acid comparising any one of the 6213 antisense sequences given in the specification where expression of the 6213 antisense sequences given in the specification where expression of the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular printeration, (7) identifying a compound that inhibits proliferation; (8) identifying a gene required for cellular proliferation or the activity of the gene product or that has an activity against a biological pathway required for proliferation or the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound,'s activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the confideration of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form the print of the printed specification, but was obtained in electronic format directly from Will are proved by the printed proliferation in the propers of the printed specification, but was obtained in the compount of proved proved by the printed by the proved proved by the printed 
                                                                                                                                                                                                                                                                                                                                                                                   New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to an isolated nucleic acid comprising any one of

B2/D+A. The polymucleotides have potential intiinflammatory, antibacterial and immunosuppressive activity as part of pharmaceutical compositions used to treat, palliate or prevent extra-intestinal E. coli infections. The polypeptides are useful for determining the phylogenic group of a given E. coli strain. These polypeptides can detect and treat an undesired development of E. coli, particularly an extra-intestinal infection that include systemic and non-diarrhoeal infections such as septicaemia, pyelonephritis and meningitis this is particularly advantageous as bacterial resistance is increasing with the more frequent use of broad spectrum antibiotics
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    A library of DNA fragments of Escherichia coli strains for the phylogenic determination of a given strain comprises polynucleotides of nature B2/D +
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a library of DNA fragments of Escherichia coli
strains comprising polynucleotides (ABA88577-ABA88729 and ABA89533) and
encoded proteins (ABB52459-ABB52919 and ABB52954-ABB53094) of nature
                                                Escherichia coli; B2/D+A-; antiinflammatory; antibacterial; immunosuppressive, extra-intestinal infection; phylogeny; meningitis; systemic infection; non-diarrhoeal infection; septicaemia; phylonephritis; antibiotic resistance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       18-JUN-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               16-JUN-
 ^{2}
                                                                                                                                                                                                                                                                                                                                                           The invention relates to constructing (M1) a strain of diploid fungal cells in which both alleles of a gene are modified, comprising modifying cells in which both alleles of a gene are modified, comprising modifying cone allele by insertion or replacement by a cassette having an expressible selectable marker and modifying other allele by insertion of the second allele is regulated by the promoter. So that expression of the second allele is regulated by the promoter. (M1) is useful for constructing a strain of diploid fungal cells in which both alleles modified are useful for identifying a gene that cells anying both alleles modified are useful for identifying a gene that is essential to the survival or growth of a fungus, a gene that contributes to the virulence and/or pathogenicity of a fungus, a gene that contributes to the resistance of a diploid fungus to an antifungal agent that inhibits the growth of a diploid fungus and for identifying a therapeutic agent for treatment of a mammalian disease. (M1) is useful for identifying a compound which modulates the certifyty of a gene product, preferably enzymatic activity, carbon compound catabolism, biosymthetic, transporter, transcriptional, translational, signal transduction, DNA replication and cell division compound catabolism, biosymthetic, transporter, transcriptional, cativity of an underly of a useful for identifying a compound having the ability to inhibit growth or proliferation of C. albicans cells and cativity and a susferial candida albicans protein used in the method is the printed specification but is based on sequence information supplied to Derwent by the European Patent Office
                                                                                                                                                                                                                                                                 Constructing strains for identifying gene products as effective targets for therapeutic intervention, by inactivating in the strain one allele of a gene and placing other allele of the gene under conditional expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Protein identification; signal transduction pathway; metabolic pathway; hybridisation assay; genetic mapping; gene expression control; promoter; termination sequence.

This is the amino acid for cytochrome 2P450RAI of the Zebra fish. Its expression is dependent on the presence of retinoic acid (RA). The retinoid-regulated genes such as the inducible cytochrome P450RAI gene specifically metabolises a derivative of the RA. The cytochrome P450 gene
                                                                                                                                                                                                                  predisposition to glaucoma. The method comprises amplifying a GLCIA gene with a primer pair selected from the sequences shown in AA237981-Z38008. The primers are used to determine whether a subject has or has the potential to develop primary open wide angle glaucoma. The present sequence represents the mouse GLCIA polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Identifying DNA encoding inducible or suppressible cytochrome P450 - by screening for drugs which reduce the catabolism of retinoic acid, useful

```

```
This protein comprises a novel zebrafish retinoid metabolising protein, designated zP450RAI. Its amino acid sequence was deduced from a cDNA clone (see AAV12203) isolated from a 6-18 hr embryo library. It includes a haem-binding motif characteristic of cytochrome P450 proteins. zP450RAI is a retinoid oxidase that has the ability to hydroxylate retinoic acid at the 4 position of the beta-ionone ring, and is inducible in epithelial calls exposed to retinoic acid. Zebrafish, human and mouse P450RAIS (see AAW4159-61) are claimed. They can be expressed in host cells and used to metabolize retinoic acid in a organism or cell, in drug screening, and contained an experiment of cancer, actinic keratosis, oral lenkoplakia, secondary tumours of the head and/or neck, non-small cell lung carcinomas, basal cell carcinomas, acute promyelocytic leukaemia, skin cancer, and premalignancy associated with actinic keratosis, acne, psoriasis and/or
                                                                                                                                                                                                                       ó
in general produces enzymes involved in the oxidative metabolism of endogenous and exogenous compounds. The cytochrome P450 nucleotide sequence can be used to induce or suppress the expression of its protein. P450RAI is highly induced by RA in cell lines and tissues. This allows for development of a drug screen using promoters and nucleotide sequences to identify drugs which are useful for reducing the catabolism of RA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Retinoid metabolising protein - useful to develop products to treat, e.g. cancer, actinic keratosis, oral leukoplakia, acne, psoriasis or

The present invention provides a novel all-trans-RA metabolising cytochrome P450, P450RAI-2, that is predominantly expressed in the brain. This novel cytochrome P450 is useful for metabolising retinoic acid in a cell or organism, for screening for their effect of protein activity, oxidizing a retinoid, screening an agent for its effect on protein activity. The P450RAI-2 polypeptide, nucleic acid and host cells containing them are useful for treating anser, wysplasia, an autoimmune or dermatological disease. A drug which has an effect on the expression of P450RAI-2 is used to inhibit retinoic acid metabolism in the treatment concern, actinic keratosis, oral leukoplakia, a secondary head and/or neck
                                                                                                                                                                                                                                                                                                                                                                                                                         Cytochrome P450; P450RAI-2; brain; retinoic acid; cancer; dysplasia; autoimmune; dermatological; cytostatic; antiinflammatory; antiseborrheic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          tumour, a non-small cell lung carcinoma, a basal cell carcinoma, skin cancer, and a premalignancy associated actinic keratosis, acne, psoriasis, ichthyosis, and/or preferably acute promyelocytic leukemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel P450 protein useful for metabolizing retinoic acid for treating cancer, dysplasia, an autoimmune or dermatological disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence represents a zebrafish P450RAI protein that hydroxylates retinoic acid at the 4 position of the beta-ionone ring (Updated on 11-SEP-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         2.1%; Score 7; DB 4; Length 492;

The present invention describes a polyclonal antibody (I) to a human cytochrome P450 retinoic acid metabolising peptide (P450RAI-2) comprising a sequence (see ABP52142) of 512 amino acids. (I) has expostatic, immunosuppressive and dermatological activities, and can be used in antisense therapy. (I) can be used for inhibiting P450RAI-2 induced articolar adjustment as cancer, actinic keratosis, oral reated for a disease such as cancer, actinic keratosis, oral leucoplasia, secondary tumour of the head and/or neck, non-small cell lung carcinoma, basal cell carcinoma, acute promyelocytic leukaemia, or leucoplasia and/or ichthyosis, or an in vitro system. (I) is useful for sereaning for the expression of P450RAI-2 in a sample, where the antibody interaction of P450RAI-2 in a sample, where the antibody interaction is detected by an BIISA assay.

Substrate and the antibody interaction is detected by an BIISA assay.

This method is useful for diagnosing non small lung cell carcinoma in a patient. The present sequence represents a zebrafish protein which is from the present invention. (Updated on 29-AUG-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel polyclonal antibody specific to human cytochrome P450 retinoic acid metabolizing protein, P450RAI-2, useful for inhibiting P450RAI-2 induced retinoic acid hydroxylation in a human being treated for cancer.
                                                                                                                                                                                                                                                                                           Cytochrome P450; dermatological disorder; cancer; brain disorder; cytostatic; immunosuppressive; dermatological; antisense therapy; P450RAL-2; inhibiting P450RAL-2 induced retinoic acid hydroxylation; actinic keratosis; oral leucoplasia; tumour; basal cell carcinoma; non-small cell lung carcinoma; acute promyelocytic leukaemia; acne;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Domain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Domain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New DNA fragments having promoter activity, useful in retinoid metabolism, as well as in producing retinoic acid metabolizing cytochrome P450s that are useful as targets for the treatment of certain cancers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to retinoid (e.g., retinoic acid (RA), vitamin A) metabolising proteins and nucleic acid sequences encoding them. RA metabolising proteins contain a haeme-binding motif which is characteristic of the group of proteins known as cytochrome P450s. The sequences of the invention are useful in retinoid metabolism and in producing retinoic acid metabolishing cytochrome P450s. They are producing retinoic as targets for the treatment of certain cancers and as prostate cancer. The invention also relates to a method of screening drugs for their effect on activity of RA inducible proteins. The present sequence is P450RAI protein from zebrafish. (Updated on 29-AUG-2003 to standardise OS field)
                                                                                                                                                                                                                                       Zebrafish, retinoid metabolism; retinoic acid; RA; haeme-binding motif, vitamin A; cytochrome P450; prostate cancer; drug screening; P450RAI.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   2.1%; Score 7; DB 5; Length 492; 100.0%; Pred.                    A novel trabecular meshwork induced glucocorticoid response protein (AAR98225), TIGR, is highly induced by glucocorticoids in the endothelial lining of the human trabecular meshwork. Excessive levels of TIGR are indicative of glaucoma. TIGR can be obtd. by expressing TIGR-encoding CDNA (see also AAR30152-53) in a bacterial or eukaryotic host. It can be sensitivity and related diseases. Leucine zipper-contg. peptides of TIGR encome.
                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Glucocorticoid-induced protein; TIGR; trabecular meshwork; glaucoma.

The glucocorticoid induced protein, TIGR is produced by cells of the trabecular meshwork. By determining if the amount of TIGR present in the trabecular meshwork of an eye of a patient exceeds the amount of the protein present in the trabecular meshwork of an eye of an individual who does not have, and is not predisposed to have glaucoma, you can diagnose

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and insecticides, theractions in higher eukaryotes for the development of discloses genomic DNR sequences (ABLIG176-ABL30511), expressed DNR sequences (ABLIG176-ABL30511), expressed DNR ABR72072). The sequence data for this partent did not form part of the printed specification, but was obtained in electronic form part of the from WIPO at ftp.wipo.int/pub/published_pot_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to determining whether a subject has or is at risk of developing glaucoma, retinal degenerative disease, or a cardiovascular disease, comprises generating a transcriptional or translational profile (i.e. 'fingerprint') in the subject or in a sample obtained from the subject, based on the expression of the different myocilin (MYOC, also Known as trabecular meshwork inducible glucocorticoid responsive protein, TIGR) mRNA species or polypeptide forms, where a difference in the profile relative to that in a normal subject indicates that the subject
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Determining the presence or the risk of having glaucoma, retinal degenerative or cardiovascular diseases in a subject, comprises generating transcriptional or translational profiles based on myocilin

```
glucocorticoid response protein (TIGR) which is used in a method for diagnosing glaucoma in a patient. The method involves the detection of polymorphisms whose presence is predictive of a mutation affecting TIGR response in the patient and can be diagnostic of glaucoma or steroid sensitivity. Base substitutions and base additions upstream of and within TIGR exons can also be used to diagnose glaucoma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This represents a human GLC1A protein sequence. The human GLC1A gene is associated with juvenile open angle glaucoma (30AG). The gene can be used for the development of assays for identifying molecules that modulate (agonists or antagonists) the bioactivity of a functional or mutant gene or protein. Modulators may be an antibody, protein, peptide or mutant triple helix forming nucleic acid, e.g. antisense sequence, ribozyme or a subject with glaucoma or at sisk for developing glaucoma to prevent or reduce the severity of the condition. Derivatives of GLC1A gene can be used to detect lessins of the GLC1A gene which are indicative of glaucoma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New isolated gene associated with glaucoma - used to develop products to determine whether a subject has, or is at risk of, developing glaucoma, and for treating or preventing glaucoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Glaucoma; GLCIA; treatment; mutant; juvenile open angle glaucoma; JOAG.

The sequence was deduced from an isolated cDNA clone (see AAV31484). Studies of the recombinant protein suggest (1) that the 55 kDa protein exists both in cells and in the mediuw, (2) that it undergoes oligomerisation, (3) phosphorylation, (4) glycosylation, (5) that it is susceptible to metalloprotease, (6) that it carbibits high affinity binding to extracellular matrix and HTM cells, (7) that it exhibits bind affinity binding to extracellular matrix and HTM cells, (7) that it exhibits so extracellular matrix and HTM cells, (7) that it exhibits so compared to normal patients. TIFR* cDNA, the cultures, and (8) that it exhibits high expression in the HTM of glaucomatous patients as compared to normal patients. TIFR* cDNA, the protein itself, molecules that bind it, and nucleic acid molecules that cenced it, provide improved methods and reagents for diagnosing glaucoma and related disorders, such as cardiovascular and immunological diseases that affect expression of TIGR*. A claimed method of diagnosing glaucoma involves determining if the amount of TIGR* present in the HTM exceeds the amount found in an individual not predisposed to the disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ;

This sequence represents the protein encoded by the trabecular meshwork induced glucocorticoid response (TIGR) gene, also known as MYOC, which is mapped to the GLCIA locus on chromosome 1923-925. The invention relates to the detection of mutant and non-mutant alleles of the TIGR/MYOC gene. Juvenile open-angle glaucoma, in a heterozygotic carrier of TIGR mutations, can be treated by overexpression of mutated TIGR, which renders the phenotype of the patient normal by homoallelic complementation. This method of homoallelic complementation can be used in other autosomal dominant diseases where mutant homozygotes are phenotypically normal, e.g. a form of epilepsy and mental retardation linked to chromosome X, which only affects women. The methods can also be
